Analytics reports

DON'T MANAGE YOUR FLEET, MASTER IT

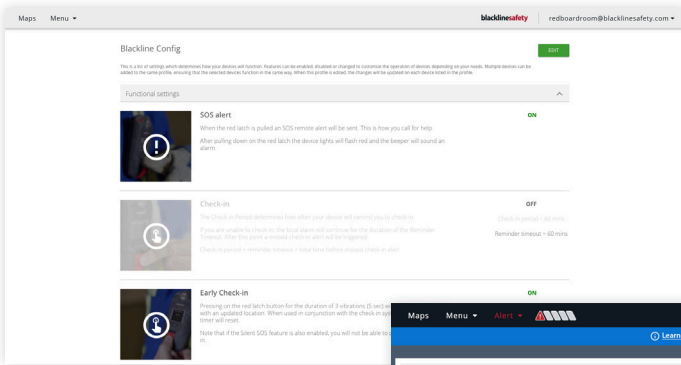

Gain real-time visibility into team wellbeing and full command of your connected safety devices with our cloud-based software platform, Blackline Live.

Accessible from any Internet-connected device, Blackline Live lets you easily manage your fleet, check-in on teams, respond to alerts and manage compliance—from anywhere.

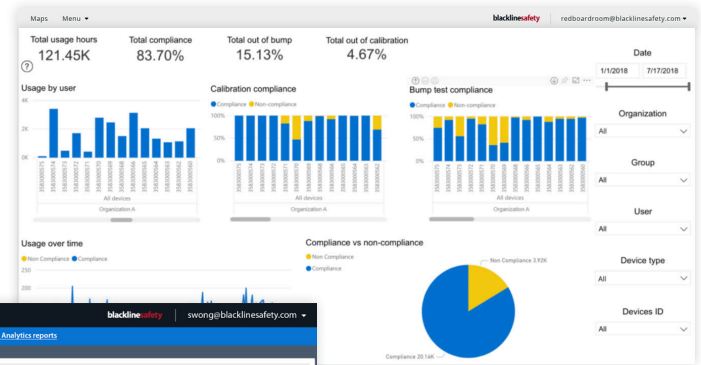

- ✓ **Streamlined Setup and Onboarding**
 - Configure and assign devices in minutes
 - Tailor emergency response protocols to your operations
 - Control access to protect privacy, secure data, and identify who sees what

- ✓ **Coordinate Responses Faster**
 - Monitor your entire fleet in real-time on a single live map
 - Act without delay when an alert comes in—with instant details on type, location and context
 - Catch exposure events as they happen and see latest gas and radiation sensor readings
 - Create zones to locate people instantly during emergencies and deliver a more accurate response

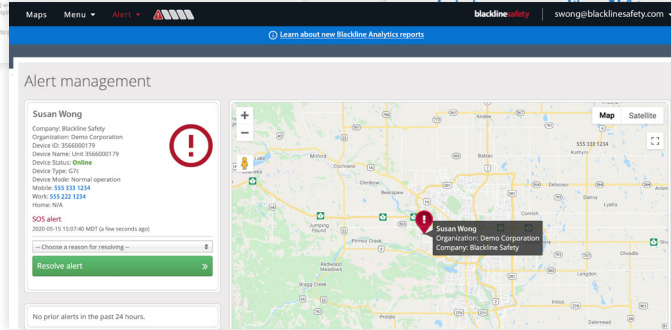

- ✓ **Simplify Compliance and Reporting**
 - Reduce manual errors with automated analytics
 - Save time with streamlined compliance and hazard reporting
 - Access a complete history of alerts and events to simplify audits and reviews
 - Get detailed bump and calibration certificates to support compliance and manage testing more effectively

Device configuration page — customize how all devices are set up for every employee role and application, including fall and no-motion detection, plus gas sensor settings

Blackline Analytics provides a dozen fully automated and interactive reports, including device usage, compliance reporting, alerts, gas exposures, and more

The alert management page provides all the tools to manage every alert according to a documented response protocol, including escalation paths and contact information

DETAILED SPECIFICATIONS

SUPPORTED BLACKLINE SAFETY DEVICES	<ul style="list-style-type: none"> G7c, G7x and G7 Bridge system, EXO 8, G7 EXO, G7 Dock, Location Beacons, Loner Mobile
BLACKLINE LIVE REQUIREMENTS	<ul style="list-style-type: none"> An electronic device with internet connectivity Web browser: Explorer/Edge, Chrome, Firefox and Safari
ALERT MANAGEMENT	<ul style="list-style-type: none"> Visual and audible indication of every alert Map the location and identity of the employee plus nearby co-workers Document alert activities with notes Resolve alerts as a system test, false alert or incident, with or without dispatch See the latest gas and radiation sensor readings
ALERT HISTORY	<ul style="list-style-type: none"> View the documented history of every alert with notations Listen to device voice recordings (requires optional two-way voice calling)
ALERT PROFILES	<ul style="list-style-type: none"> Documented emergency response protocols are easily customized Response protocols describe how monitoring personnel manage each response Notify supervisors by text and email
REAL-TIME LOCATION MAP	<ul style="list-style-type: none"> See the safety status of every team member on the Maps page History view and playback provide insights into who, when and where employees came into close contact Create zones to see where workers and contractors are in relation to pre-defined work zones
DASHBOARD	<ul style="list-style-type: none"> View real-time device usage and gas detection compliance reports Get access to a dozen of Essential Reports to analyze your fleet's safety, compliance, and performance

GAS DETECTION COMPLIANCE	<ul style="list-style-type: none"> Monitor gas detector fleet health See when sensors have not been tested or calibrated Respond to sensor test or calibration failures
DEVICE CONFIGURATION PROFILES	<ul style="list-style-type: none"> Ensure every device is correctly configured using wireless profile updates Choose alert types and settings for every device Schedule gas sensor calibration and bump test intervals Adjust gas alert thresholds
EVACUATION MANAGEMENT	<ul style="list-style-type: none"> Notify and direct individual workers or teams to muster points Trigger large-scale evacuations via mass notifications Monitor evacuation progress on a map in real time
BLACKLINE ANALYTICS	<ul style="list-style-type: none"> Every event is time-stamped and recorded Measure emergency response times to ensure performance targets are met Map gas events to identify potential hazards See Blackline Analytics datasheet for additional capabilities
ENTERPRISE-READY USER ACCESS CONTROLS	<ul style="list-style-type: none"> Customizable organization structure with individual access controls Grant the right level of access while restricting others Assign devices to contacts or allow device sharing for anonymized analytics Assign individuals as emergency contacts within alert profiles
SINGLE SIGN-ON	<ul style="list-style-type: none"> Security Assertion Markup Language (SAML) 2.0
DATA SECURITY	<ul style="list-style-type: none"> Blackline Safety Cloud infrastructure runs on AWS Data certified under EU-US Privacy Shield SOC2 Type 1 compliant
